DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, 58-60, 62, drawn to an isolated nucleic acid of SEQ ID NO: 1, encoding SEQ ID NO: 2, a vector and a host cell, classified in class 435, subclass 69.1.
- II. Claims 25-27, 40-42, drawn to a polypeptide of SEQ ID NO: 2, classified in class 530, subclass 350.
- III. Claims 28-31, 61, 64-78, drawn to a method of compound identification, classified in class 435, subclass 7.2.
- IV. Claims 32-35, drawn to a compound that modulates SEQ ID NO: 2, as it reads on, for example a peptide, classified in class 503, subclass 300.
- V. Claims 36-39, drawn to an antisense nucleic acid, classified in class 536, subclass 23.5.
- VI. Claims 43-50, drawn to a method for the production of a pharmaceutical composition, classified in class 435, subclass 69.6.
- VII. Claim 63, drawn to a method of treatment, classified in class 514, subclass 2.
- VIII. Claims 51-57, drawn to an antibody, classified in class 530, subclass 387.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, IV, V, VIII are independent and distinct, each from the other, because they are products which possess characteristic differences in structure and function, and each has an independent utility, that is distinct for each invention which cannot be exchanged.

Inventions III, VI, VII are independent and distinct, each from the other, because the methods are practiced with materially different starting materials, have materially different process steps, and are for materially different purposes.

Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the polypeptide of Group II can be used for the production of antibody.

Inventions VIII and VII are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the antibody of Group VIII can be used for the isolation of protein.

Inventions I, IV, V and III, VI, VII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
